Module 0, Quiz 0: Start Here Check

Canvas: Module 0 starter quiz

Use with: [Syllabus](#), [Course path](#), [Module 0 demo lab](#), [Module 0 exercise lab](#)

This quick bank checks startup readiness before Module 1:

1. Definition of statistics
 2. Five-step statistical process
 3. Course workload expectations
 4. Basic R syntax from Module 0 lab
-

Practice prompts

1. What is a good working definition of **statistics** for this course?
 2. How many steps are in the statistical process?
 3. What is the first step of the statistical process?
 4. Put these in order: collect data, summarize/visualize, infer/model.
 5. About how many hours per week does the syllabus expect in this 5-week term?
 6. Write an R addition expression that evaluates to 10.
 7. Write an R assignment line that stores 10 in `x` using course style.
 8. Which operator checks equality in R: `==`, `=`, or `<=`?
 9. Create vector `v` containing 1, 2, 3, 4.
 10. What does `length(v)` return for `v <- c(1,2,3,4)`?
 11. In Module 0 simulation, are draws made with or without replacement inside a trial?
-

Answer key

1. Statistics is the science of learning from data to answer questions and support decisions.
2. Five steps.
3. Ask a clear research question and define the population/parameter.
4. Collect/organize data -> summarize/visualize -> infer/model.
5. About 20–25 hours per week.
6. Example: `3 + 7`.
7. `x <- 10`.
8. `==`.
9. `v <- c(1, 2, 3, 4)`.
10. 4.
11. Without replacement.
