

Assessments

STAT 109 — Summer Session 1, 2026 (online, async)

Assessments

Graded work happens in [Canvas](#). Instructions, practice banks, and demo notebooks live on this site — see the [course path](#) for the recommended order.

Full policies (late work, AI, letter grades): [syllabus](#).

Grading overview

Component	Weight	Type
Class participation	5%	Class Chatter discussions in Canvas (one per module, Modules 0–5)
Quizzes	25%	· Q+A Discussion Low-stakes practice of key terms, concepts, and code syntax from readings and labs · best of 4 attempts per quiz · open notes
R coding exercise labs	20%	Read the demo, then try writing your own in the exercise notebook · graded on completion
Projects 1–5	50%	Personalized portfolio projects applying course methods to meaningful questions · one-page summary + runnable R notebook each
Total	100%	

There are **no midterm or final exams** in this async session. Exam-style reasoning appears in quizzes and projects instead.

Practice quiz banks on this site are open-ended with answer keys. Canvas quizzes may draw a random subset and autograde where possible.

Class participation (5%)

Activity	Where	Grading
Class Chatter	Canvas · one discussion per module (0–5)	Participation — connection and engagement, not statistical correctness
Q+A Discussion	Canvas	Ask and answer course questions; participation

Quizzes (25%)

Quizzes check vocabulary, concepts, and basic R syntax from [readings](#) and [labs](#). They are **open notes** — use your [methods map](#) and [R reference](#).

Attempts: Canvas records up to **four attempts** per quiz; your **best score** counts toward the course grade.

Module 0 (Start here)

Quiz	Purpose	Practice bank
Quiz 0 — Start Here	Definition of statistics, five-step process, three worlds, notebook basics	Same page
Quiz 0B — Question Ideas	Three short research questions (essay; Step 1 practice)	Same page

Modules 1–5 (each module)

Quiz	When (typical)	Practice bank
Quiz A (Def & Notation)	After Read 1	<code>quizzes/quiz-m*-def</code>
Quiz B (Concept Check)	After Read 2	<code>quizzes/quiz-m*-concept</code>
Synthesis	After exercise lab (often Thursday)	<code>quizzes/quiz-m*-synthesis</code>

Module	Quiz A	Quiz B	Synthesis
1	Def & Notation	Concept Check	Synthesis
2	Def & Notation	Concept Check	Synthesis
3	Def & Notation	Concept Check	Synthesis
4	Def & Notation	Concept Check	Synthesis
5	Def & Notation	Concept Check	Synthesis

Image-based graph items are in the **Module 1** and **Module 3** synthesis banks; see also [Graph Interpretation Pack](#). Legacy 15-week quiz pages remain on the site for reference but are **not** on the async course path.

R coding exercise labs (20%)

Each module includes a **demo lab** (follow along on the course site — not graded) and an **exercise lab** (submit in Canvas, typically **Wednesday**).

Module	Demo	Exercise (submit)
0	Demo	Exercise
1	Demo, Conditional demo	Exercise
2	Demo	Exercise
3	Demo	Exercise
4	Demo	Exercise
5	Demo	Exercise

Grading: completion of the exercise submission (run your notebook, answer prompts, upload in Canvas). Demo labs prepare you for the exercise and for quiz items.

Submission: Upload your completed `.ipynb` (and any required text) in Canvas. Colab links are on each lab page.

Project milestones

Short **planning checkpoints** (typically **Friday**) help catch direction errors before the full project is due. Submit in Canvas (part of project workflow; not a separate grade category).

Module	Milestone focus
1	Research question; p in context; H_0/H_a ; BRP conditions; null-graph draft
2	Population, unit, sampling frame, SRS plan, sample size, CI method
3	Dataset link; four variables typed; plan for two figures + four numeric facts
4	Variables/units; design (RCT vs observational); confounder; method choice; simulation plan + <code>set.seed()</code>
5	Team, predictor/response, measurement plan, model draft, valid prediction target

Projects (50%)

Five portfolio projects — each includes a **one-page summary** (PDF or equivalent) and a **runnable R notebook**. Recommended pacing is on the [course path](#); **all graded work must be in Canvas by 11:59 pm PST July 2, 2026** ([syllabus](#)).

Project	Module	Recommended due (2026)	Link
Project 1 — Testing a Claim	1	Mon Jun 8	Project 1
Project 2 — Estimating the Truth	2	Mon Jun 15	Project 2
Project 3 — Discovering Patterns	3	Mon Jun 22	Project 3
Project 4 — Designing Fair Comparisons	4	Mon Jun 29	Project 4
Project 5 — Looking Ahead	5	Thu Jul 2	Project 5

Module 1 milestone notebook: [Project 1 milestone](#) · [.ipynb](#)

Project 2 templates: [Mean CI notebook](#) · [Proportion CI notebook](#)

Project notebook rubric (20 points)

Used across all five projects:

Criterion	Pts	Meets expectations
Runs and is organized	3	Labeled sections; runs top-to-bottom
Correct method and code	4	Method matches question and variable types
Output quality	4	Readable titles, labels, units
Interpretation in context	5	Meaning in problem language, not software jargon
Reproducibility	2	Data source documented; <code>set.seed()</code> when simulating
Reflection / limitations	2	At least one limitation or improvement
Total	20	

One-page PDF rubrics are on each project page.

Module 5 portfolio package

With **Project 5** (due **Thursday July 2**), submit a **portfolio package** that ties the term together:

- Index page linking all five projects
- Five one-page summaries + notebook links (polished for submission)
- Brief revision memo if you updated work after feedback
- Short reflection: what you can now do in applied statistics
- Both reference sheets ([methods](#), [R reference](#)) submitted or linked

This is part of the **Project 5 / end-of-term** deliverable, not a separate grade line on the syllabus.

Grading scale

A: 93–100% · A-: 90–92% · B+: 87–89% · B: 83–86% · B-: 80–82% · C+: 77–79% · C: 73–76% · C-: 70–72% · D: 60–69% · F: 0–59%

A minimum grade of **C-** is required for the course to count toward GE Area B4.

At a glance (module dates)

Module	Dates	Project due (recommended)
0 — Start here	Before Jun 1	—
1 — Testing a Claim	Jun 1–7	Mon Jun 8
2 — Estimating the Truth	Jun 8–14	Mon Jun 15
3 — Discovering Patterns	Jun 15–21	Mon Jun 22
4 — Designing Fair Comparisons	Jun 22–28	Mon Jun 29
5 — Looking Ahead	Jun 29–Jul 2	Thu Jul 2 (Project 5 + portfolio)

Details and learning outcomes: [course path](#).
